Distribution Centre Contaminated Fuel Project

A solid orange horizontal bar at the bottom of the slide.

Incident support

Qualitech were called in by our client to help resolve a problem with contaminated diesel.

The client had had several trucks break down due to the fuel contamination.

Qualitech sampled their underground storage tank and sent the samples off for analysis.

The fuel could not be recovered and so had to be disposed of.

Solution to the problem

The fuel was removed from the underground tank for disposal.

The tank was then opened and cleaned ready for inspection.

Non Destructive Testing (NDT) was carried out on the tank to establish if there are any areas of the tank which have failed.

Repairs will be carried out and preventative maintenance plan put in place.

All of these services from the removal, cleaning, inspection and repair will be managed by Qualitech.

Thank you for your time.
